

Usage Meters

KILL A WATT POWER MONITOR

- Cumulative kilowatt-hour monitor
- Helps you forecast your costs
- Displays Volts, Amps, Watts, Hz, VA
- Large LCD screen
- Accuracy: +/- 0.2%

Reduce your energy bills with this electricity usage monitor. Connect an appliance into the 'Kill A Watt' and read the electrical consumption by the kilowatt-hour on the large LCD screen. Virtually any household could use this device and reduce the electrical bill over several months by an amount greater than the one-time cost of this unit.

MODEL	DESCRIPTION
P4400	Kill A Watt Power Monitor

KILL A WATT EZ POWER MONITOR

- Accuracy: +/- 0.2%
- Large LCD display
- Calculates cost per time period
- Forecasts by week, month and year
- Displays eight critical units of measure
- Built-in battery backup

Connect appliances and see how efficiently they use power. Evaluate the quality of your line power; perfect for detecting brownouts before they damage your equipment. Displays 10 critical units of measure: Volts, Amps, Watts, Hz, VA, KWH, PF (power factor), elapsed time, rate and cost. Built-in battery backup to retain accumulated readings if power is interrupted.

P4460	Kill A Watt EZ Power Monitor

KILL A WATT ELECTRICITY USAGE POWERSTRIP

- Advanced surge protection circuitry
- Soft power-up
- Displays max/min volts, amps, watts, PF & leakage current
- 6 regular and 2 convenience outlets
- 6ft cord with low profile plug

Protect your valuable electronics at the same time as you find out what they are actually costing you. Calculate your cumulative electrical usage and forecast by the day, week, month, even an entire year. Also check the quality of your power by monitoring voltage, line frequency, amperage, KWH and more.

P4320	Kill A Watt Electricity Usage Powerstrip

ENERGY POWERCOST MONITOR

- Read moment-to-moment energy use for the whole household
- Track cumulative information
- Displays energy in KW and \$
- Programmable for local utility rates

Easy-to-use and easily installed electric power monitor allows you to see how much electric power you and your family are using at any moment. Numerous independent research studies have confirmed that most families using the PowerCostMonitor™ have experienced energy use reduction of 6-18%. The sensor attaches to the outside meter (no electrician required) and makes wireless connection to the monitor.

MODEL	DESCRIPTION
BLI-28000	Energy PowerCost Monitor

POWERCOST MONITOR - WIFI EDITION

- See your own energy consumption patterns
- Track and compare your home energy usage over time
- Compare your energy usage to others in your area
- See the connection between your energy habits and your power bill
- Track your energy savings as you make changes
- Connect with others and learn while sharing your experience

Fully integrated with the Microsoft® Hohm™ energy portal, this monitor gives you highly personalized energy information, while showing you where and how you can save energy and money. The WiFi gateway is an optional accessory, requiring both the monitor and an in-home wireless router.
